

# Metric Units

LENGTH meter	WEIGHT gram	VOLUME liter
-----------------	----------------	-----------------

BASE UNITS

## How To Convert

move the decimal point in the original number the direction and number of spaces shown in the ladder

EXAMPLE

convert 0.56 kilometers to meters

meters is 3 steps right of kilometers, so move the decimal point 3 places right

$$0.560 \text{ km} = 560 \text{ m}$$
